# Value-Based Care

Value-based care reimbursement models continue to mature as the healthcare ecosystem strives to lower costs, enhance clinical quality, and improve patient outcomes. CMS continues to drive the transition towards shared risk and accountability through programs like Medicare Advantage, Managed Medicaid, I-SNP, and advanced alternative payment models. Payers offering value-based payment plans must modernize and expand their capabilities to remain competitive in the market and optimize profitability.

It is crucial for payers to modernize their data and technology capabilities to meet the evolving needs of value-based care programs. High-quality data is critical for payers to comply with CMS and NCQA regulations while optimizing performance on STAR ratings, HEDIS quality measures, RAF scoring, and MIPS reporting. Shared risk arrangements also empower payers to more actively share clinical data with providers and allow the use of that data in advanced analytics and care coordination for members. Putting data to work in value-based care initiatives directly impacts financial performance, population health outcomes, member satisfaction, and retention.

The Clearsense Approach

1Clearsense, an all-in-one healthcare data platform, aggregates data from various sources and is powered by the Clearsense Healthcare Data Model. This model offers pre-built integrations and accelerators to rapidly implement connections, mapping, and data quality rules, ensuring data lineage and traceability. With payer and provider data residing within the common healthcare data model, organizations can determine the source of truth and assign trust rules. Collaborating with organizations, Clearsense establishes granular data access policies and assigns security controls. Accessible data can be seamlessly utilized in 1Clearsense analytics, outgoing integrations, and existing payer applications and use cases through 1Clearsense's bring-your-own-tool (BYOT) capabilities.

How Clearsense Helps

- Act as an all-in-one solution for clinical data aggregation and enforcement of data quality standards in compliance with NCQA's data aggregator validation (DAV) program.

- A unified data model for aggregation and normalization of ADT messages, CCDs, and other clinical data through HL7, FHIR APIs, and point-to-point connections

- Improve the accuracy of provider attribution to individual members.

- Increase the visibility of member risk, close care gaps, and improve quality measure performance by readily using claims and clinical data in unified analytics.

- Deliver transparent quality measure reporting with source data to empower provider engagement and collaboration on member care management.

- Enable member risk stratification, hierarchical condition categories (HCC), and predictive intervention to identify emerging member risk, empower care coordination, and reduce the risk of RADV-driven recoupments.

- Leverage accurate provider data and aggregated clinical data to produce out-of-the-box STAR Rating analytics targeting opportunities to improve performance.

Benefits

- Ensure clinical data is readily usable in value-based care use cases, including risk adjustment, quality measures, utilization management, and care coordination.

- Aggregate data and manage quality on a single platform to reduce vendor spend and enhance data-driven decision-making.

- Reduce organizational complexity to increase agility and scalability of data integration, analytics, and care coordination.

- Reduce time to create advanced analytics and integrate data into application workflows for risk optimization, quality measures, and utilization management.

- Empower staff with visual dashboards of provider scorecards of member and patient adherence.

Get To Know Us

Committed to leading transformation in healthcare, Clearsense® creates a data journey, all the way from number to key insight. Cloud-based, AI-enabled, and HITRUST-certified, the platform of data solutions ensure data governance, implementation, and analytics are rapidly mainstreamed while remaining scalable and secure. Driving faster outcomes in clinical, financial, and operational environments, Clearsense is powering the innovation of tomorrow—right now.

The Clearsense Promise

Our Mission
Our mission is to unlock the full potential of healthcare data by delivering flexible solutions that empower data confidence and enable data-driven decision-making to achieve better outcomes.

Our Vision
We have created a holistic data environment with processes to cleanse, normalize, harmonize, and integrate better data with tools to make it more manageable, accessible, and valuable. We are unlocking the potential of data from patient care decisions, business operations, financial routines, and research.

Why Choose Clearsense?

One Platform, One Partner
One partner with an advanced end-to-end platform that empowers executives, business owners, clinicians, IT, and data scientists.

Data First Approach
Eliminates assumptions and replaces them with a single source of trusted data. Put trusted data into action without barriers or fear.

Healthcare Focused
We are 100% focused on the healthcare industry, which means we understand your data challenges and opportunities.

Security
Multi-cloud, HITRUST certified, HIPAA and SOC 2 compliant with SSO Integration. Role-based security controls at the application and data levels. We treat security with the highest level of importance.

Data Quality & Trustworthiness
Data governance advisory services wrapped around AI technologies and processes ensure the highest level of data trustworthiness.
